

Linked Learning

Pushing "Linked Learning on school districts through "ConnectEd: The California Center for Career and College"
A nonprofit we just learned was operating in several other states (Wisconsin, New York, Michigan, Texas, Ohio...
state-specific name. The previous image ("About" page description of James Irvine's collaboration with
ConnectEd to provide "Linked Learning") description omitted the "approach to _____" part of
sentence, but we can see the goal is SYSTEM-WIDE transformation.

Is your district interested in transforming the high school experience to better serve all your students and your community?

Linked Learning is a powerful approach to system-wide transformation. We will work with your district, site and classroom leaders to assess where you are, then co-design a system of Linked Learning pathways that will help prepare your students for college, career, community and life. Linked Learning combines four components; rigorous academics, career and technical education, work-based learning, and student supports.

If you'd like to learn more about what Linked Learning looks like, take a look at this video featuring Health Professions High School. If you like what you see, consider joining us for an interactive Experiential Site Visit.

What is Linked Learning?
